

3x more efficient
than that of our competitors,
entirely dependable,
as confirmed by Innovationstechnik

Newsletter of the Black Point Group Special Edition

Kamila Yamasaki, President of Black Point S.A.

It is years since we cooperated with independent institutions that verify the parameters of the cartridges manufactured by Black Point e.g. American Rochester Institute of Technology or Wrocław University of Technology. Our products are constantly tested also in the laboratory of Black Point. Recently we have decided to do something entirely exceptional. We have carried out the tests of our cartridges in one of the most renowned institutes that examines the consumables – Innovationstechnik. The results of these tests allow the users to compare the cartridges of Black Point with the products of the printer manufacturer from the point of view of the quality, efficiency, and reliability.

The company Black Point S.A. is the first Polish manufacturer of the printing consumables the products of which have been tested in the independent laboratories of Innovationstechnik.

TOPIC OF THIS ISSUE

Prestigious tests of Black Point

According to the report prepared by one of the prominent, independent research institutes that carried out the comparative tests of the cartridges to the popular HP ink printers, the cartridges manufactured by Black Point are much more efficient than the cartridges of the printer manufacturer and as reliable and of equally good quality. What is Innovationstechnik?

Innovationstechnik from Brema is one of the prominent, independent institutes of worldwide renown that since 1979 has dealt with the questions of maintaining the quality in different branches of the industry. The first significant client for the institute was the company Nordmende from Brema, the manufacturer of good quality consumer electronics. This institute devised a system for the company that enabled the automatic comparison of the television parameters on the production line. Due to such solutions, Innovationstechnik earned reputation as a centre that guarantees the objectivity of the results. [\[see more\]](#)

INNOVATIONSTECHNIK

Most objective tests in the world

- Our tests do not focus on whether the image on the screen or a given print-out is „good” or „bad”. First of all, we have implemented complete procedures of testing different products in an automatic way, which guarantees the independence and objectivity of the results – an interview with Jürgen Kuls, the engineer from Innovationstechnik in Brema. The secret of the cartridges of Black Point

- For the production of the cartridges we use the best raw materials and we apply the most advanced technologies. Last year we implemented e.g. an ink improvement system. Due to this system, the dye is de-gassed and cooled before it goes to the cartridge – the secrets of the company are revealed by Marek Piszczek, the product engineer in Black Point. – the secrets of the company are revealed by Marek Piszczek, the product engineer in Black Point.
